

# DIGITAL BUSINESS TRANSFORMATION ACCELERATED BY OIL & GAS FIELD DATA CAPTURE PLATFORM

Transitioning applicable O&G company assets and processes from physical to digital requires time, skills, and money. But with the right tools, it can be affordable, fast, and seamless.

One of Digital Oil & Gas Solutions largest partners started its intelligent digitalization journey by integrating a Well Manager system first. The progress was substantial, but the well data management flow still depended on manual processes and paper grease books. Hence, the company couldn't tend its wells' portfolio effectively.

Digital Oil & Gas Solutions suggested implementing its Field Data Capture application (FDCA) to solve the problem. With this tool, the partner finally bridged the gap between incoming Well Manager data and manual work still required for wells supervision. As a result, FDCA enabled continuous digitization of the oil production processes, streamlining field personnel's operations.

## HOW FIELD DATA CAPTURE APPLICATION BOOSTS OIL & GAS COMPANY DIGITAL CAPABILITIES

Operators can remotely monitor all the maintenance-related activities, like pressure, downtimes, treatments, meter readings, or fluid shipments, and get automated alerts

Tenders can enter information on their wells via mobile devices in several clicks, eliminating dozens of manual processes and paperwork

FDCA provides a 30-days production history review on all assets — tenders can update data as required while capturing an audit trail of the processes

Well owners are enabled to capitalize on the built-in ticketing process for gauges and products and their transfer to other tanks or haulers

With the app, one can automatically transfer all the relevant data into production meetings, reporting, and production revenue department, thus, do allocations daily if needed
